

Test Case Name	User Story	Test Case ID	Test Action	Expected Results	Test Result	Pass/Fail
AI Extraction	US_01	IAPO-01	Submit a message stating the student is in the MS CS program	The extracted object should record the level as graduate	The service returned level = graduate and program = MS in Computer Science	PASS
		IAPO-02	Submit a message that uses the word 'undergrad'	The level should be undergraduate, not mistaken for graduate	The service correctly returned level = undergraduate	PASS
		IAPO-03	Submit a message listing completed courses as 'CS 101' and 'CS201'	Both course codes should be extracted and written in a consistent format	The service returned completed_courses = CS101, CS201	PASS
		IAPO-04	Submit a message stating a limit of 6 credits per semester	The credit limit should be captured as a hard constraint	The service returned max_credits_per_term = 6	PASS
		IAPO-05	Submit a complete student message and validate the response	The returned object should match the shared solver schema with no invalid fields	The response validated against the StudentPlanRequest schema with no errors	PASS

Test Case Name	User Story	Test Case ID	Test Action	Expected Results	Test Result	Pass/Fail
Transparency Flags	US_03	IAPO-06	Submit a message that leaves the start term unstated	The AI should record the value it assumed rather than filling it in silently	The response listed the assumed value under assumptions in the metadata	PASS
		IAPO-07	Submit a message with missing or vague details	Any field the student did not state should be flagged for confirmation	The response listed those fields under needs_confirmation in the metadata	PASS

Test Case Name	User Story	Test Case ID	Test Action	Expected Results	Test Result	Pass/Fail
API Service	US_01	IAPO-08	Send a POST request to the /extract endpoint with student text	The endpoint should return a 200 response containing the structured object	The endpoint returned 200 with the completed courses and level populated	PASS
		IAPO-09	Send a GET request to the /health endpoint	The endpoint should confirm the service is running	The endpoint returned 200 with a status of ok	PASS
