

Persona 3

Department Administrator

Michael Rodriguez , 56
Computer Science Department Chair

As Department administrators, they lack visibility into which prerequisite chains and requirements most often delay students, relying on manual reviews to gauge curriculum effectiveness. IAPO surfaces common academic pathways and bottlenecks by analyzing generated degree plans, supporting data-driven decisions about curriculum and course planning to improve on-time graduation rates.

Problems:

- Limited prerequisite visibility
- Hidden academic bottlenecks
- Manual progress analysis
- No centralized insights

Goals:

- Identify graduation delays
- Track student progression
- Improve curriculum planning
- Increase graduation success
