

User Stories

Story ID	Role	Feature	User Story	Priority	Status
US-01	Student	Express scheduling preferences in plain language	As a student, I want to describe my scheduling preferences in my own words so the system understands what I need without me filling out extra forms.	Must	Done
US-02	Student	Upload transcript to auto-detect completed courses	As a student, I want to upload my PDF transcript and have my completed courses automatically identified so I don't have to manually list every class I've taken.	Must	Done
US-03	Academic Advisor	Receive structured constraints from student free text	As an academic advisor, I want the AI to translate a student's natural language input into structured scheduling constraints (days off, time preferences, modality) so the solver can process them without manual interpretation.	Must	Done
US-04	Department Admin	AI output uses official constraint vocabulary	As a department administrator, I want the AI to output constraints using the standardized types (RequiredDaysOff, PreferredInstructionMethod, AvoidTime, etc.) so the data integrates directly with the scheduling solver.	Must	Done
